## **ABSTRACT**

A mail survey was conducted following the 2018-2019 season to quantify trapper harvest and effort for furbearer species. Surveys were mailed to 1,500 randomly selected trappers who held annual or multi-year trapping licenses valid during the 2018-2019 season ( $N=1,924$ ). Of the 1,500 surveys mailed, 548 (36.5%) were returned and all contained some usable data. Of the trappers who responded, 294 (53.6%) reported that they trapped during the 2018-2019 season (active trappers) and 254 (46.4%) reported that they did not trap (non-active trappers). The number of active trappers that provided usable information for county/effort analyses was 284 (96.6%). On average, active trappers set 11.6 (SE  $\pm 0.8$ ) traps for 33.3 (SE  $\pm 2.3$ ) days during the 2018-2019 season. Response data was used to estimate trapping experiences of non-respondents and calculate total harvest, number of trappers, trapping effort, and catch per unit effort for each furbearer species statewide and by region. Trappers harvested an estimated statewide total of  $34,349 \pm 112.1$  furbearers. Raccoons and opossum were the most-harvested species with estimated totals of  $9,534 \pm 35.3$  and  $5,529 \pm 19.9$ , respectfully. Observations of fishers, spotted skunks, and least weasels were also reported by trappers.

## **GOAL & OBJECTIVE**

To quantify 2018-2019 statewide trapper effort and furbearer harvest and obtain additional occurrence information for rare furbearer species (i.e., fisher, spotted skunk, and least weasel).

## **METHODS**

A total of 1,924 persons possessed Virginia trapping licenses valid during the 2018-2019 trapping season. From that total, a random sample of 1,500 persons was selected using information from the Virginia Department of Game & Inland Fisheries license database. The sample represented 78.0% of all license holders who held a valid license for some portion the 2018-2019 season including statewide resident (includes senior, junior and regular,  $N=892$ ), county/city license holders ( $N=562$ ), multi-year

license holders (N=26), and nonresident license holders (N=20). On 13 May 2019, each trapper was mailed a one-page (front and back) questionnaire (Appendix A), cover letter (Appendix B), and a postage-paid return envelope. A reminder postcard (Appendix C) was sent to non-respondents on 14 June 2019 (N=1,191). A third and final mailing identical to the first was sent on 3 August 2019 to survey recipients who did not respond to the previous two mailings (N=1,123). No surveys were reported as undeliverable so the effective sampling total was 1,500. Trapping season date information is provided in Appendix D. Survey response data (i.e., harvest data) were entered into an Access database where they were checked for quality and cleaned prior to statistical analyses.

*Data Analysis.*—Descriptive and inferential statistical analyses were conducted in RStudio (R Core Team 2018) with the assistance of R library packages “dplyr” (Wickham et al. 2018) and “survey” (Lumley 2017). Raw harvest data (county, species, number harvested, days trapped, number traps) were imported from the Access database as .csv files, transposed from column to row format, and used to create and append additional variables to the matrix, including trap region, number of trap days, and whether the data record represented target or non-target efforts and if trap efforts were successful. Successful harvest data were considered non-target harvest, or “bycatch”, if the respondent reported take but zero trap days (i.e., number of days x number of traps), or if the species was marked as “non-target” in the response. These variables were used to subset and analyze data by target versus non-target efforts, successful versus non-successful efforts, and by region.

Input data for inferential statistical analyses conducted with R package “survey” were prepared by summarizing (subset) harvest data by individual trappers (rows) and species (columns) for the parameter of interest. Using these new input matrices, statewide and regional statistics (Tables 9–12) were estimated using the “svydesign()” function in R which allows for the incorporation of a finite population correction factor (FPC). For example, to estimate the total number of successful target

trappers (Table 10), the function is multiplying the proportion of successful target trappers among all survey responses ( $313/557 = 0.562$ ) by the total number of trapping licenses ( $0.562 * 1,924 = 918$ ). Whereas standard deviations (SD) are presented to describe the variability of survey response data (e.g., *average days trapped*; descriptive statistics) and provide ranges for estimates, standard errors (SE) are presented to provide a measure of precision around estimated parameters (e.g., *estimated total number of furbearer species harvested*) and were calculated by dividing the standard deviation (SD) by the square root of the appropriate sample size.

In addition, as is recommended when sampling is conducted without replacement from more than 5% of a finite population, a finite population correction factor (FPC) was used to calculate SE (i.e., more than 5% of the population of 2018-2019 trappers were sampled; 548 samples; finite population = 1,924 trapping licenses) (Lumley 2010; Thompson 2012). As survey responses were not normally distributed, 95% confidence intervals were calculated by using a logarithmic transformation of the estimate and delta-method approximation of variance (Seber 1982; Fletcher 2008). Hence, 95% CIs will not be symmetrical around parameter estimates.

## RESULTS

A total of 548 (36.5% effective response rate) license holders responded to the survey (Table 1). Of the 548 surveys returned, all were considered usable responses for some aspect of the analysis. Of these, 10 were considered unusable (contained incomplete or unreliable data) for county/effort analysis. Of the 548 total returned surveys, 294 (53.6%) reported trapping activity during the 2018-2019 season (active trappers) and 254 (46.4%) reported no trapping activity (non-active trappers). Statewide, an estimated 1,031 (53.6% \* 1,924) trappers set, on average, 11.6 (SE  $\pm$  0.8) traps for 33.3 (SE  $\pm$  2.3) days and harvested an estimated total of  $34,349 \pm 112.2$  furbearers (Tables 11 and 12). By species, total statewide trapper harvest was estimated to be 9,534 raccoons, 5,529 opossums, 4,388 coyotes, 4,216

muskrats, 3,998 red foxes, 3,490 beavers, 1,023 gray foxes, 840 striped skunks, 579 otters, 569 bobcats, 161 mink, 21 nutria, and 0 long-tailed weasels (Table 11). Average harvest per season for trappers targeting certain species was highest for muskrat, followed by raccoon, opossum, beaver, red fox, coyote, striped skunk, otter, gray fox, mink, bobcat, and nutria (Table 12). Trapper responses by license type and reported numbers of trappers, effort, and harvest from response data are presented in Tables 1–8. Extrapolated statewide and regional trapping effort and harvest estimates for all furbearer species are presented in Tables 9–12. Rare furbearer observations are reported in Table 13.

Table 13. Rare furbearer observations based upon responses to the 2018-2019 Trapper Harvest Survey

Species	No. observed	No. trapped	List of counties observed <sup>1</sup>	List of counties where trapped
Fisher	9	0	Shenandoah, Frederick, Fauquier, Stafford, Virginia Beach, Washington, Bath, indeterminable	None
Spotted Skunk	10	1	Alleghany, Rockbridge, Nottoway, Augusta	indeterminable
Least Weasel	3	0	Bath, Washington, Carroll, Caroline	None

<sup>1</sup> county locations are provided where possible and are based on descriptions provided by respondents. Some reports did not specify county, or did not provide sufficient information to determine county.

# Appendix A: Survey Instrument

This is your 2018-2019 Virginia Trapper Harvest Survey. Please complete the survey and return it in the enclosed business reply envelope. Your response is completely confidential and very important. Please send in your response, even if you did not trap this season. If you have any questions or concerns, please contact Furbearer Project Leader Mike Fies at (540) 248-9390 or mike.fies@dgif.virginia.gov.

First, did you trap in Virginia between November 15, 2018 and February 28, 2019?

Yes       No

If NO, stop here and return the survey in the postage-paid envelope.

If YES, please follow the instructions below and complete the remainder of the survey on the other side of this page.

**Instructions for Completing the Trapping Table:**

1. Please only report information for furbearers trapped during the general trapping season (Nov. 15, 2018 to Feb. 28, 2019). Do not report information for animals trapped under authorization of a Commercial Nuisance Animal Permit or other nuisance animals trapped outside the general season. Also, please do not include live foxes trapped for transport to foxhound training preserves.
2. **For Primary and Secondary Target Species (animals you were targeting when you set the traps):**
  - The **primary target** species is the animal you were most interested in catching in a particular trap set. If you were targeting multiple species with the same trap set (i.e. a dirt hole set for coyotes and foxes), please choose one species as your primary target and list the others as **secondary targets**.
  - For each **primary target** species, please circle "P" in the first column and indicate total # of animals trapped, total # of days trapped, and average # of traps set per day in each county. See beaver example for how to report primary target species trapping.
  - For each **secondary target** species, please circle "S" in the first column and list the same information as for target species, including the # of animals trapped, total # of days trapped, and average # of traps set per day in each county. See red fox/gray fox/raccoon example for reporting a trap line with primary and secondary targets.
  - If you were unsuccessful at catching a targeted species, place a "0" for the total # of animals trapped, but still report the total # of days trapped and the average # of traps set per day for that species. See bobcat example for how to report unsuccessful target species trapping.
3. **For Non-Target/Incidental Species (animals you were not intending to capture as either a primary or secondary target):**
  - If you captured non-target/incidental animals, please report the total # of animals trapped, but place a "0" for the total # of days trapped and a "0" for the average # of traps set per day, since these animals were not the target of your traps. See opossum and striped skunk examples for how to report incidentally trapped animals.
4. **For fisher, spotted skunk, and least weasel:**
  - Please indicate if you observed or trapped these species during the past trapping season. If YES, please provide a detailed location where each animal was observed or trapped OR you may contact DGIF Furbearer Project Leader Mike Fies at 540-248-9390 or mike.fies@dgif.virginia.gov to provide specific details.

**PLEASE READ THE INSTRUCTIONS ON THE OPPOSITE SIDE OF THIS PAGE BEFORE COMPLETING THIS SURVEY.**

**Write in the name of each county or city in which you trapped**

	Example	County/City #1			County/City #2			County/City #3		
		Buckingham								
For each species, record whether it was a primary, secondary, or non-target species, total # of animals trapped, total # days trapped, and average # traps set per day (please see instructions on opposite side of page) →

**COMMONWEALTH of VIRGINIA**  
*Department of Game and Inland Fisheries*

Gary F. Martel  
*Acting Executive Director*

April 23, 2019

Dear Trapper,

Enclosed you will find the 2018-19 Virginia Trapper Harvest Survey from the Virginia Department of Game and Inland Fisheries. We would appreciate your cooperation in this voluntary survey designed to provide us with the necessary information to estimate the statewide harvest of furbearers during the 2018-19 trapping season.

This survey is being sent to a random sample of Virginia licensed trappers. It is important that every recipient send in a response. All information on this survey is **completely confidential**. No personally identifiable information is being collected on the survey so that responses cannot be tied to an individual. A postage-paid envelope (addressed to our survey administrators at Virginia Tech) is enclosed for your convenience in returning the completed questionnaire.

If you have questions or comments about this survey, please feel free to contact Mike Fies, Furbearer Project Leader, via email at [mike.fies@dgif.virginia.gov](mailto:mike.fies@dgif.virginia.gov), phone at (540) 248-9390, or by mail at Virginia Department of Game and Inland Fisheries, P.O. Box 996, Verona, VA 24482.

Your assistance in providing trapping harvest information is greatly appreciated and important for effectively managing Virginia's furbearers in the future. Please try to complete and return the questionnaire **within the next 10 days**. Thanks in advance for your cooperation.

Sincerely,

A handwritten signature in black ink, appearing to read "Michael L. Fies".

Michael L. Fies  
Furbearer Project Leader  
Virginia Dept. of Game and Inland Fisheries

# Appendix C: Postcard Reminder

2018-2019 Virginia Trapper Survey Reminder

**We haven't heard from you yet!** This is a friendly reminder to fill out and return the 2018-2019 Virginia Trapper Survey that was recently mailed to you. If you have already completed this **confidential** survey and returned it, please accept our sincere thanks and disregard this reminder notice. If you haven't returned the survey yet, please do so at your earliest convenience. Your response is important to us and will help generate meaningful estimates of statewide furbearer harvests to effectively manage populations for future trappers. If you did not receive a questionnaire, it was misplaced, or you have questions about the survey, please feel free to contact me at 540-248-9390 or [mike.fies@dgif.virginia.gov](mailto:mike.fies@dgif.virginia.gov)

Thank you,

Mike Fies  
Furbearer Project Leader  
Virginia Department of Game & Inland Fisheries

# Appendix D: 2018–2019

## Virginia Trapping Season Dates

There is a continuous open season to trap beaver, muskrat, opossum, and raccoon within the incorporated limits of any city or town in the Commonwealth, and in the counties of Arlington, Chesterfield, Fairfax, Henrico, James City, Loudoun, Prince William, Spotsylvania, Stafford, Roanoke, and York.

When beavers are damaging crops or lands, the owner of the premises, his agent, or tenant, may kill the animals or have them killed. This includes shooting, except in areas where the discharge of firearms is prohibited.

Species	Start of Season	End of Season
Beaver	December 1 <sup>st</sup>	February 28 <sup>th</sup>
Bobcat	November 15 <sup>th</sup>	February 28 <sup>th</sup>
Coyote	Continuous open season	
Fisher	Continuous <b>closed</b> season	
Fox <sup>1</sup>	November 15 <sup>th</sup>	February 28 <sup>th</sup>
Mink	December 1 <sup>st</sup>	February 28 <sup>th</sup>
Muskrat	December 1 <sup>st</sup>	February 28 <sup>th</sup>
Nutria	Continuous open season	
Opossum	November 15 <sup>th</sup>	February 28 <sup>th</sup>
Otter	December 1 <sup>st</sup>	February 28 <sup>th</sup>
Raccoon	November 15 <sup>th</sup>	February 28 <sup>th</sup>
Striped Skunk	Continuous open season	
Spotted Skunk	Continuous <b>closed</b> season <sup>2</sup>	
Weasel	December 1 <sup>st</sup>	February 28 <sup>th</sup>

<sup>1</sup> Fox trapping is prohibited in Clarke (except on G. Richard Thompson WMA), Fauquier (except on Chester F. Phelps WMA and G. Richard Thompson WMA), Loudoun, and Rappahannock counties.

<sup>2</sup> Spotted skunk and the pelts of spotted skunk may not be sold.

## **Appendix E: Map of Trapping Regions in Virginia**
