

Virginia Counties and Cities Affected by the Ongoing Bird Mortality Event

Sick/Dead Birds Reported 5/23 – 6/30

- 1 - 23
- 24 - 37
- 38 - 136
- 137 - 512
- Not Included in the Affected Area

Affected areas (all blue, yellow, orange, and red counties and cities): An area is considered affected by the mortality event if more than 10 reports of sick or dead birds* has been received within a 7 day period since May 23 or if more than three birds originating from the county have been assessed by a licensed veterinarian to be exhibiting eye or neurological signs consistent with the case definition since May 23.

*** Sick/dead bird reports:** Includes all of the reports of dead and sick birds received by DWR and other cooperating entities and localities between May 23 and June 30. This cumulative number likely includes many reports of mortalities from injuries (e.g. window or vehicle strikes), illness, etc. which are unrelated to the mortality event. In addition, higher human densities in a particular area often results in higher reporting rates. Thus, this map is not an exact representation of the number of birds affected by the mortality event in question and total reports from an area is likely influenced by human density.
