

Fishing Fun!

Growing Up WILD Guide pages 32-33

Fish need healthy aquatic habitats that include clean water, plants for food and to produce oxygen and places to hide from predators and lay their eggs. Color the pond below, be sure to add plants and hiding places. Once your pond is ready, color and cut out the parts of the fish above. Place a paper clip on each part and put the fish in the pond. Make a fishing pole with a pencil, string and small magnet. Go fishing for the shapes to put your fish back together. Have Fun!
