 $\Psi$ 

How big is the bird in relation to a known species such as a robin?

What shape is the beak?

How big is the beak relative to the rest of the body? How long is the tail compared to the body?

Is the end of the tail square, pointed, round, or forked? How long are the legs compared to the body?

**Plumage** (color and pattern of the bird's feathers) What color are the feathers? How would you describe the color pattern?

## **Other Field Marks** (visible characteristics)

Is there an eye ring (tissue or feathers surrounding the eye) and what color is it? What color are the legs? Can you find other markings?

## Habitat

Where do you see the bird (land, shore, water, etc.)?
